

## Swimming Race

You are an expert in video-based motion analysis and temporal reasoning. I will provide you with a video of a swimming race. The swimmer at the top of the frame is in lane 1, and the lane numbers increase from top to bottom. Your task is to determine which swimmer will reach the finish line first between lane {OPTION\_A} and lane {OPTION\_B}. Please observe the video carefully, strictly follow the analysis steps below, and output your final answer in a fixed format.

### [Analysis Steps]

1. Lane Identification: Identify the swimmers in lane {OPTION\_A} and lane {OPTION\_B} based on their vertical positions in the frame.
2. Motion Analysis: Observe and compare their movement over time, focusing on their speed, stroke consistency, and forward progress.
3. Order Prediction: Based on their motion trends, determine which swimmer will reach the finish line first.

### [Output Format Requirements]

Please strictly adhere to the following XML tag format for your response. Do not add any extra text outside the tags.

<thinking>

Write your detailed reasoning process based on the three steps above here.

</thinking>

<answer>

{OPTION\_A} or {OPTION\_B}

</answer>
