

☑: This is a driving video. Please determine whether the vehicle in the green box shows subtle movement during the video. Answer Yes or No.

✦: The vehicle in the green box is driving forward normally, and its movement relative to the camera and the environment is clear and continuous throughout the video clip. This represents steady, obvious motion rather than subtle movement. Yes. ❌

✳: Looking at the sequence of images, I need to track the vehicle highlighted in the green box across all frames to determine if it shows subtle movement. In the first frame, the green box highlights a vehicle (appears to be a white/silver car) that is ahead in the same lane, relatively far away. As the frames progress, the vehicle in the green box appears to get larger (closer to the camera), suggesting the ego vehicle (camera) is approaching it, or the tracked vehicle is relatively stationary/moving slower than the ego vehicle. Looking more carefully at the progression: The tracked vehicle (in green box) appears to grow in size relative to the frame as the sequence progresses. The vehicle's position in the frame shifts slightly downward and gets larger. The vehicle is indeed moving forward but at a slower pace than the ego vehicle, which explains why it appears to get progressively closer and larger across the frames. Yes. The vehicle in the green box shows subtle movement throughout the video sequence. While the ego vehicle (camera) is clearly approaching it (the tracked car grows larger in each frame), the tracked vehicle itself is also moving forward, as evidenced by its changing position relative to fixed elements like road markings (ONLY, BUS) and buildings. The vehicle appears to be traveling in the same direction but at a slower speed than the ego vehicle, resulting in the closing distance between them. ❌

🌀: Determining vehicle movement. I need to answer whether the boxed vehicle shows subtle movement in the video. I'm inferring relative motion across the frames. There's a silver SUV ahead in the left center lane, and as I analyze the frames, it looks like both the box and the car grow larger and shift slightly left relative to the lane. Since the ego car is also moving forward, it appears the target vehicle is subtly moving as well. It shifts left, grows, and progresses towards the intersection. So, my answer is Yes. Yes. ❌
