

✂️ : This is a video of a golf shot. Please predict whether the golf ball will go into the hole based on its observed trajectory. Answer Yes or No.

🌈 : Predicting Ball Trajectory. I'm currently focused on analyzing the golf ball's path after it's hit from the rough. My process involves tracking its landing on the green, observing its roll, and determining if it will ultimately find the hole. Based on the video, the golf ball rolls past the hole and does not go in. Therefore, the answer is No. ❌

🌸 : Looking at the sequence of images, I can see a golfer hitting an approach shot from the fairway. The ball travels through the air and lands on the green, rolling toward the flag/pin. In the final frames, the ball appears to be rolling close to the hole but stops near it rather than going in. No. ❌

🌀 : Inferring trajectory direction. I need to give a yes or no answer based on the sequence of frames. The ball approaches from the right, rolling left toward the hole. In the last frame, it appears just to the right and slightly below the hole, maybe about a foot away. I need to predict whether it will go in based on its observed trajectory. It seems likely that the ball will stop near the hole but not actually go in. So, the answer is no. No. ❌
