

Ego Motion

You are an expert in video-based spatial reasoning. I will provide you with a video recorded by a moving camera in an indoor scene. The target object is the {TARGET}. Your task is to determine the final position of the target object relative to the camera. The two candidate answers are: {OPTION_A} and {OPTION_B}. Please observe the video carefully, strictly follow the analysis steps below, and output your final answer in a fixed format.

[Analysis Steps]

1. Target Object Identification: Identify the {TARGET} and observe its position in the scene.
2. Relative Motion Analysis: Track how the target object's position changes relative to the moving camera throughout the video.
3. Final Position Determination: Based on the relative motion, determine whether the final position is {OPTION_A} or {OPTION_B}.

[Output Format Requirements]

Please strictly adhere to the following XML tag format for your response. Do not add any extra text outside the tags.

<thinking>

Write your detailed reasoning process based on the three steps above here.

</thinking>

<answer>

[{OPTION_A} or {OPTION_B}]

</answer>
